EXPERIENCE

Senior BE Developer

Donatix

📅 12/2023 - 04/2024   📍 Sofia City, Bulgaria · Hybrid

Bug fixing, augmentation, and maintenance of existing products.

- Dockerization of the local environment for Vue SPA, Laravel, and Echo.
- Implementation of horizontal scaling and vertical descaling for a high-performance Laravel Redis setup handling 10 million operations per second.
- Planning for an ElasticSearch upgrade.

Senior BE Developer

Jiminny

📅 07/2021 - 03/2023   📍 Bulgaria · Remote

As a senior back-end developer, I was responsible for planning, developing, and implementing various features and functionalities using a per-mini project approach within an Agile process. My responsibilities also included bug definition, reproduction, and resolution. I worked with a tech stack that included Laravel, MariaDB, Elasticsearch, Redis, and various SaaS tools like CircleCI, Sentry, and Datadog. Version control was managed using GitHub, while cloud services were managed through AWS and virtualization was done using Docker. Overall, my role as a senior back-end developer required not just technical expertise, but also strong problem-solving skills, attention to detail, and a drive for continuous improvement.

- Orchestration module for AWS EC2 instances, optimized for fine cost optimization based on workload and time.
- Integration of Microsoft Teams notifications.
- SCIM integration based on 50% RFC requirements.
- In-house scaling solution for RDS to Elasticsearch synchronization process with more than 1 billion documents, resulting in a process that can be scaled and tuned in real-time.
- ISMS logging system with Elasticsearch persistence.
- High-performance customer API with OpenAPI documentation.
- Various dashboards, tools, and improvements to existing products that improved quality of life, saved developers time, and increased visibility.
- Performance analyses and root cause workarounds, such as deep dives with strace.
- Elasticsearch full-text search aggregations.
- Reworking the feedback product to introduce hierarchy.
- Improving coverage and functionality of proprietary bot product.

Telecommunications Engineer (Solution Architect and Backend dev responsibilities)

Deltatel

📅 03/2015 - 04/2021   📍 Sofia, Sofia City, Bulgaria (including remote work)

Contractor for Nokia. Main client Vivacom. Overall 99% project execution automation achieved in a single responsibility model. Participating project/process/network design discussions actively. Single responsibility for design, implement, test, troubleshoot and deploy Cli PHP, SQL tool for mass configuration generation {6mb-12mb text} with 99.9% covered final configuration for the project. Input is parsed normalized tableized data. Multiple phases with 99.999% success (0% customer services downtime) and positive customer feedback requested/delivered parametrization and 100% project goals reached in planned schedule. Design, develop, support of multiple smaller tools for real time device data mining and data analysis, port mappings generation, configuration generation web interface and port mapping support using PHP, sql, vuejs. Primary goal and focus - uncompromising time/manpower saving with zero quality negative effect. Everyday using - PHP, laravel, SQL. Every month used - JavaScript, Vue.js, python, d3v3-5 and many own self helping tools solving specific problems.

Data Network Specialist

"Electron Progress" EAD

📅 05/2013 - 03/2015   📍 null

Company Description

- Implement ip/MPLS networks classified government and military projects.

SUMMARY

With over 12 years of experience as a developer and 15 years as a telecommunications engineer, I have a proven track record of success in the telecommunications industry and automation having also impact in couple of startups. My career journey has taken me from telco telephone support to a contractor for Nokia, where I was responsible for the design and delivery of project execution, and now as a senior developer.I bring a diverse skill set that includes PHP, relational databases, Network MPLS/QoS technology, process definition and optimization, and OOP programming. My expertise extends to full-stack solutions using Vue, Laravel, Redis, MySQL, Elasticsearch run by Docker on AWS/Ubuntu(metal).I hold a Bachelor's degree in Mathematics from Sofia University St. Kliment Ohridski, which has provided a strong foundation for my engineering career. I am passionate about leveraging my extensive experience to drive innovation and deliver impactful solutions.More @ ogi.li
